Introduction

This technical calibration guide is developed for AWS partners who have applied, or are interested in, the Amazon Web Services (AWS) [Foundational Technical Review \(FTR\) for Service Offerings](#). This guide covers all 8 controls in “**FTR for Service Offering Requirements**” [checklist](#).

The calibration guide format is the FAQs for each control. It provides clarity on the expected level of details of the requested evidence and improve the application quality. It helps partners reduce application cycle time and achieve FTR validation and consulting offer listing with AWS faster. Additionally, partners can adopt the best practices in this technical guide to improve their AWS service offerings.

Each control has the following FAQs:

What are the criteria for passing this control?

This section discusses what level of information is needed to pass a particular control. It clarifies the requirement for partner to self-assess when collecting artifacts.

Why is this important?

This section explains why a particular control is essential from a customer success or AWS Well-Architected perspective.

How can you implement this?

This section discusses how to implement the specific control using AWS services. It provides step-by-step guidance and different options for partner to adopt AWS recommended best practices.

What are good example responses?

This section provides good response examples that meet the control and displays the level of depth and expertise required in the assessment.

What are unacceptable responses?

This section is composed of response examples not meeting the requirement of the control.

DEF-001 - define the core of service offering (what, who, and how)

Requirement

This is the foundation of your service offering. It must provide customers with details of your technical capabilities and experience on the service offering to make an informed decision. Provide an offering URL listed in Partner Central which contains the following information:

- Service details including reference architecture diagram if applicable, use cases and AWS value proposition
- Characteristics and profiles of target customers
- Customer engagement and delivery mechanism

Criteria for Passing

- Provide a public landing page that describes your offer specifics related with AWS
- Partner website, AWS Marketplace listing, or any other publicly accessible link qualifies

Why is this important?

It provides clear value proposition and technical expertise so that customers can assess if this fits their use case.

How can you implement this?

You can create a publicly accessible page from homepage by highlighting specific practice, solutions on AWS, or leveraged AWS services related with the offer. You should consider including customer reference if applicable.

As an alternative, you can leverage [AWS Market place](#) and use the listing URL for Professional Service Products.

To create a reference architecture diagram, you can use a tool such as draw.io or other tools of your choice and import AWS [service and product list](#) from our [toolkits](#). It's important that the diagrams indicate primary AWS native services, demonstrate major networking components and how components communicate with users over the internet.

Additional Resources

[How to Build an Architecture Diagram](#)

Good Example Response

- **Service Offering Details example (From tecRacer):** This consulting offering enables EKS clusters to use multi-AZ block storage based on Amazon FSx for NetApp ONTAP - including capabilities like fast cloning, storage deduplication, and synchronization with classical NetApp on-premises storage.
- **Target customer profile example:** Any Company targeted customer profile includes (1) customers who have e-commerce platforms who are looking to enhance consumer's shopping experiences (2) entrepreneurs who are looking to launch a digital customer experience platform (3) physical retail stores who are looking to take business online.
- **Customer engagement and delivery mechanism example:** This is a consulting offer by Any Company. Once we have identified client needs in the first or second client call, we issue a Statement of Work (SoW) with a timeline. This SoW will be submitted to client (for approval of the overall approach) and to AWS (e.g. to the AWS APN funding portal)

Unacceptable/Insufficient Information

Response is unacceptable or doesn't have the sufficient information when:

- Partner doesn't have a public URL for the listed offer
- Public link doesn't indicate AWS relevance
- Response doesn't have all three components - who, what & how.
- No architecture diagram included for an offer involves hands-on implementation

PROJ-001 - Define a customer engagement project plan template

Requirement

A project plan with an end-to-end engagement process (for example, scope-define-implement-deliver-conclude) is critical to align customer expectation. Partner provides a project plan template with the following components:

- Definition of statement of work, project deliverables and expected timeline
- Representative project implementation phases, roles and responsibilities on staff (project management, technical consultants) allocation for each phase
- Process of how & when handover to customers occur

Criteria for Passing

Partner Provides a stand-alone project plan template that describes your offer specifics related with AWS

Why is this important?

A standard project plan template is essential for consulting offers to ensure consistency, efficiency, communication, quality, and risk management. It provides a clear framework for executing projects and ensures that all team members are aligned on the project goals and objectives.

How can you implement this?

Partner Provides project plan template document that includes the following aspects of a standard project plan:

Executive Summary

Provide a high-level overview of the project. Briefly describe customer's business goals and technical requirements, and how partners' deliverables help customer achieve those.

Scope of Work

Provide a list of items and activities as scope of the work expected to be accomplished by the AWS Service Partner.

Summary of milestones and deliverables

Provide project milestones with timeline and respective deliverables per stage.

Project sponsor(s) / Stakeholder(s) / Project team

Identify and list the customer's Executive Sponsor and Project Stakeholders as well as Partners' Project team.

Solution Architecture/Architecture Diagrams

If your offering includes solution architecture, provide an architecture diagram with a description of the proposed high-level technical architecture. Proposed Architecture should follow AWS Well-Architected Framework best practices.

Handover Process and customer sign off

Provide description of handover readiness check and customer routine ops after engagement.

Good Example Response

See Appendix A for a project plan template example and Appendix B example from Autoverse Database Refactor and Migration offer. Each component of project plan described in this requirement has relevant details related to the specific offer.

Additionally, see below for some example project plan components related to building a Amazon QuickSight dashboard as a digital customer experience offer.

- **Project Deliverables:**
 - Fully enabled technical solution package capable of integrating different platforms with timeline X
 - Data visualization dashboard for reporting and analytical capability using Amazon QuickSight with timeline X
- **Roles:**
 - Project Manager – Oversee projects and work, involved throughout the project
 - UI/UX engineer – Implements platform and creates customizations, involved with phase 2 implementation
 - Digital Experience SME – Understand client needs and guide UI/UX engineers, involved during phase 1 and phase 2
 - Analyst – Communicate with the project team and customer, involved throughout the project

Unacceptable/Insufficient Information

Over-simplified answer is not acceptable as it lacks key information about project implementation processes, this offer is not packaged for consistent customer on-boarding. For example,

- XXX discuss with customer for custom YYY operation sizing considering budget constraints.
- XXX implements the following process

- => Define customer requirement
- => Set up YYY application and optimize with resource management
- => Hand over to customer when project is completed

TECH-001 - Identify relevant AWS technical expertise for the service offering

Requirement

You should have a process to identify the right AWS expertise and ensure that there are sufficient trained personnel to effectively support customers. Provide written descriptions on:

- Details of AWS expertise needed for the specific service offering (for example AWS service names, domain knowledge or industry use cases)
- Required credentials, certifications and trainings for customer facing consultant

Criteria for Passing

- Describe all 3 components – technical expertise, credentials and training related with the specific offer.

Why is this important?

To ensure Partner possess right AWS expertise and has sufficient trained personnel to effectively support the customers.

How can you implement this?

You can first identify the AWS services expertise and industry domain knowledge required for the offer. Next, you can develop onboarding and training plans for your consultants for consistent customer engagement.

For building well-architected workloads with AWS services, you can incorporate [AWS Well-Architected Labs](#). Additionally, [AWS Partner Training and Certification](#) provides some free training through self-paced digital courses on AWS fundamentals. You can also register for instructor-led training to further support the development of your teams' AWS skills.

Additional Resources

- [AWS Getting Started Resource Center](#)
- [AWS Blogs](#)
- [AWS Online Tech Talks](#)
- [AWS Events and Webinars](#)

Good Example Response

The offer is based on AWS Data & Analytics Competency in the Media industry. The solution requires AWS Data & Analytics services expertise combined with industry know-how.

- **Technical Expertise**
 - **AWS Services Expertise:** S3, Amplify, Quicksight, IAM, DynamoDB, EMR, Kinesis, Lambda, API Gateway, Personalize, SageMaker
 - **Domain/Industry Expertise:** Media & Entertainment; Advertising & Marketing Technologies, AWS Data & Analytics Competency;
- **Required Credentials:** AWS Data & Analytics- Specialty Certifications, AWS Solutions Architect – Professional
- **Trainings:** AdTech Domain training, a training path include minimum of X courses from different learning platforms like AWS, Cloudguru and Cloudacademy within Y months.

Unacceptable/Insufficient Information

- Simply states credentials or certs are required without listing any details
- No AWS Specialist certifications listed for the relevant offer (for example, no AWS security specialty certification for offer related with AWS security assessment)

RISK-004 - Identify and mitigate risks associated with the service offering

Requirement

You must have a process to identify and mitigate potential risk exposure to customers. For example, you can use AWS Well Architecture framework to review and identify risks on your AWS workload. You must provide written descriptions on:

- Identified high risk areas (compliance, technical limitations, 3rd party resources) related to AWS service offering
- Mitigation considerations for each identified risk

Criteria for Passing

Provide risk identification and mitigation descriptions details.

Why is this important?

Established risk mitigation procedures helps to minimize risks and reduce the impact to customers.

How can you implement this?

You can use [AWS Well Architecture framework to](#) review and identify risks on AWS workloads.

For customer industry workload with compliance requirements such as NIST, PCI DSS, HIPAA, consider building [risk management, and Compliance capabilities](#) such as tagging, log storage, data de-Identification, audits and others.

Good Example Response

- AnyCompany's Digital Platform uses AWS's Well-Architected framework guidelines and best practices, we conduct the architecture review every X to Y months depending on client requirements along with red-teaming exercises.
- AnyCompany has also developed Zero Trust governance model to assess the security readiness of AWS estate that covers the gaps around Users, Data, Network, Identity, and Applications and SOC functions.

Unacceptable/Insufficient Information

- XXX component used AWS Managed Service and fully Open Source packages. And Customer will bring own 3rd Party ISV Solution for XXX such as Siemens, Ansys, Dassult, Altair.
- N/A is not an acceptable response.

SEC-001 - Secure AWS accounts governance

Requirement

Your internal Security Standard Operation Procedure (SOP) must include secure AWS accounts governance. If you create AWS accounts on behalf of customers, you must enable MFA on root, set accounts contact information using company information, create cloud watch alerts. Please provide the following evidence:

- Description of process used to create AWS accounts on behalf of customers

Criteria for Passing

- Description details must follow best practices listed in [AWS Startup Security Baseline](#).
- Partners who do not create an account for their customer must still incorporate a standard set of security controls into Security account governance SOP.

Why is this important?

Not every one of your customer engagements will require creating AWS accounts, but we need our Partners to be equipped with this knowledge and have a consistent way to onboard both consultants and customers. Consequences of not doing this right can be very detrimental. We have had Partners create accounts for customers using their personal email account and when they left the company, customers were stuck not being able to perform any root user activities, and also were exposed to a huge security risk.

How can you implement this?

- From the AWS Prescriptive Guidance page, follow the specific topics below to [Secure Your Account](#)
 - [ACCT.01 – Set account-level contacts to valid email distribution lists](#)
 - [ACCT.02 – Restrict use of the root user](#) (also addresses setting up MFA for root user)
 - [ACCT.07 – Deliver CloudTrail logs to a protected S3 bucket](#)

Additional Resources

- [Setting S3 Bucket Policy for Multiple accounts](#)

- [Turn on Cloudtrail in Additional Accounts](#)
- [CloudTrail Log Files from Multiple Accounts](#)

Good Example Response

- AnyCompany ensures proper company email address and accounts are used in their client's AWS account. AnyCompany validates the customer is not using root access for any and MFA is set up for the root account. Root user is only used for tasks that require it (example - XX). We have CloudTrail enabled in all AWS regions and the logs are sent to a dedicated S3 bucket that has MFA delete set up to protect against accidental deletion. The bucket is only accessible by X individuals within the company and is restricted by IAM policies. We have attached to the application a PDF of our Security Engagement SOP that discusses these standard best practices. This is the standard document we use to onboard customers and ensure customer awareness.

Unacceptable/Insufficient Information

Answering “yes”, “N/A”, or “We did not perform this as part of this engagement, this was the customer’s responsibility” to the questions without further explanation, or omitting any of the above information.

SEC-002 - Secure access to customer-owned AWS accounts

Requirement:

You must have a standard approach to access customer-owned accounts using temporary credentials such as IAM roles. If you maintain access to a customer-owned AWS account to provide ongoing operational support, that access must be provided through a cross-account IAM role. Customers may not provide IAM user credentials to the AWS Partner for long term access. Please provide the following evidence:

- Description of the process used to access customer-owned AWS accounts. This should include both AWS Management Console access and programmatic access using the AWS Command Line Interface or other custom tools.

Criteria for Passing

- Description details must follow best practices listed in [Security best practices in IAM](#)

Why is this important?

Having a default, standard recommendation for accessing customer account is critical to earn customer trust. As customers' trusted advisor, you should educate and help customers implement AWS IAM security best practices. With these standard IAM best practices in place, you can quickly onboard new customers and consultants.

How can you implement this?

The first & foremost important principles is to avoid using static credentials such as long-term access keys in IAM. Instead, you can work with your customers to [create across-account IAM roles](#) and generate temporary security credentials to access their AWS resources. You can leverage external IDs when accessing customer accounts using IAM roles. For machine identities, such as EC2 instances or Lambda functions, require the use of IAM roles instead of IAM users with long term access keys. For workforce identities, use AWS SSO, or federation with IAM, to access AWS accounts. Specifically, we recommend Partners [use federation with an identity provider for human user to access customer AWS account using temporary credentials](#). Below is an example diagram.

When setting permissions with IAM policies, you should grant only the permissions required to perform a task. You do this by defining *least-privilege permissions*. You can leverage IAM Access Analyzer to [generate least-privilege policies based on access activity](#).

Additional Resources

- Require identities to dynamically acquire [temporary credentials](#)
- Regularly [review IAM permissions](#).
- See [IAM Access Analyzer policy validation](#).
- [Security best practices in IAM](#)

Good Example Response

AnyCompany adopts [Security best practices in IAM](#). Specifically, we use IAM roles with temporary security credentials to access to customer accounts. Every developer user signs-in using their own Active Directory credential, which is integrated with AWS using SAML to assume a role defined by the client's security team. AnyCompany provides customers with CloudFormation templates (see attached example section related to role and policy creation) to create roles with Least privilege and ensure that customers have a process to remove roles once project is done.

Unacceptable/Insufficient Information

- Anything making a reference to use of long-term credential usage or shared credentials
- "N/A" or any answer similar to: "We did not perform this as part of this engagement"

SAAS-001 - SaaS components pass a software AWS Foundational Technical Review (FTR).

Requirement

Any components of the offering that are operated by the AWS Partner in a software-as-a-service delivery model must pass an AWS software foundational Technical Review (FTR).

Criteria for Passing

- The FTR status must be **approved** for components of the offering that are operated by the AWS Partner in a software-as-a-service delivery.
- Partners can answer this as **N/A** if their service offering does not include a SaaS component.

Why is this important?

Enables Partners to identify and remediate risks in their software components or solutions as part of their service offering. Whether the software is delivered as a SaaS solution or deployed by customers, the FTR helps to identify AWS Well-Architected best practices specific to your software or solution.

How can you implement this?

You can follow this application guide to get your SaaS Component evaluated. In addition, you can use this technical enablement series (skill builder link) to identify and remediate gaps.

Good Example Response

SaaS component of the offer (*list details*) has been approved with *APN SFDC link for the software product offer*).

Unacceptable/Insufficient Information

Not listing the SaaS component or providing approved status for it.

CUS-001- Implement a process to collect customer feedback

Requirement

You must implement a customer feedback collection mechanism including milestone-defined checkpoints, engagement outcome assessment such as customer reaction/satisfaction, business impacts, etc.

Criteria for Passing

Define post customer feedback channels and processes that track milestones, Voice of the Customers and enables escalation.

Why is this important?

Customer feedback fosters positive change fast. You can use customer feedback to continuously improve the offering and customer satisfaction.

How can you implement this?

Define a post-interact process that can collect, process, and report feedback, rather than a one-time feedback collection.

Good Example Response

AnyCompany designates a project manager to each account to be the Customer's Advocate for the governance program. The governance program is based on the service offerings and consists of multiple customer touch points, including bi-weekly meetings, which allow customers to provide direct feedback. Additionally, we have a survey mechanism (partners attach links/snapshots) where customer feedback including customer satisfaction score are incorporated into our feedback system. Project Manager will work with the customer and internal teams to address the feedback. The results and action items based on customer feedback are reviewed at the senior leadership level.

Unacceptable/Insufficient Information

Simply stating a way of collecting feedback without details on how it is used for iterations and improvement of continued customer engagement.

Resources

- Visit [Application Guide](#) , [Demo Video](#) for application process
- Review Service Offering FTR announcement in [APN Blog](#)
- Conduct self-assessment with Service offering FTR [Checklist](#)

Notices

Partners are responsible for making their own independent assessment of the information in this document. This document: (a) is for informational purposes only, (b) represents current AWS product offerings and practices, which are subject to change without notice, and (c) does not create any commitments or assurances from AWS and its affiliates, suppliers or licensors. AWS products or services are provided "as is" without warranties, representations, or conditions of any kind, whether express or implied. The responsibilities and liabilities of AWS to its customers and partners are controlled by AWS agreements, and this document is not part of, nor does it modify, any agreement between AWS and its customers/partners.

Appendix A- Project Plan Template Example

[Customer] – [Partner] – [Date]

Project Overview

executive summary

[Use this section of the document to provide a high-level overview of the project. Briefly describe the customer's business and technical objectives. Briefly summarize the partner's professional services to be delivered to meet the customer's objectives.]

[To conclude a project, define acceptance process here. For example:

Appendix B- Project Plan Template Autoverse Example

BETWEEN (NAME OF AUTHORIZED USER) AND AUTOVERSE.TECH INCORPORATED

ISSUED UNDER

CONTRACT NUMBER XXXXXXXXXX BETWEEN

XXXXXX

AND

AUTOVERSE.TECH INCORPORATED

Date Effective for Work Order: (Date this SOW is in effect)

This Work Order is issued pursuant to the (Name of Master Service Agreement and Number) effective (Date Master Service Agreement Signed) (the "Agreement"), between Autoverse.tech Incorporated ("Supplier") and (Name of Agency/Institution) and is hereby incorporated by reference into the Agreement.

*[Note to Template Users: Instructions for using this template to draft a Statement of Work are in gray highlight and **italics**. These instructions should be deleted after the appropriate text has been added to the Statement of Work. Contractual language is **not italicized** and should remain in the document. Text that is highlighted in blue is variable based on the nature of the project.]*

STATEMENT OF WORK

This Statement of Work (SOW) is issued by the (Name of Agency/Institution), hereinafter referred to as "Authorized User" under the provisions of the Contract. The objective of the project described in this SOW is for the Supplier to provide the Authorized User with a Solution ("Solution") or Services ("Services") or Software ("Software") or Hardware and Maintenance or Licensed Application Services" for Authorized User Project Name. (Customize the last sentence to state what you are getting from the Supplier, based on the Contract language, and with your project name.)

1. PERIOD OF PERFORMANCE

The work authorized in this SOW will occur within XX months of execution of this Statement of Work. This includes delivery, installation, implementation, integration, testing and acceptance all of products and services necessary to implement the Authorized User's Solution, training, and any support, other than on-going maintenance services. The period of performance for maintenance services shall be one (1) year after implementation or end of Warranty Period and may be extended for additional one

(1) year periods, pursuant to and unless otherwise specified in the Contract. (Customize this section

to match what you are getting from the Supplier, based on the allowable scope and your project's specific needs within that allowable scope.)

2. PLACE OF PERFORMANCE

(Assign performance locations to major milestones or any other project granularity, depending on your transparency and governance needs, if needed.)

Tasks associated with this project will be performed at **the Authorized User's location(s) in City/State, at Supplier's location(s) in City/State,** or other locations as required by the effort.

3. PROJECT DEFINITIONS

Provide project unique definitions so that all stakeholders have the same understanding. Ensure these do not conflict with the Contract definition.)

All definitions of the Contract shall apply to and take precedence over this SOW. Authorized User's specific project definitions are listed below:

4. PROJECT SCOPE

(Provide a description of the scope of your project and carve out what is NOT in the scope of your project..

A. General Description of the Project Scope

B. Project Boundaries

5. AUTHORIZED USER'S SPECIFIC REQUIREMENTS

(Provide information about your project's and your agency's specific requirements for this particular project including, but not limited to the following subsections):

A. Authorized User-Specific Requirements

B. Special Considerations for Implementing Technology at Authorized User's Location(s)

C. Other Project Characteristics to Insure Success

6. CURRENT SITUATION

(Provide enough background information to clearly state the current situation to Supplier so that Supplier cannot come back during performance claiming any unknowns or surprises. Some example subsections are provided below. You may collapse/expand as you feel is necessary to provide adequate information and detail.)

A. Background of Authorized User's Business Situation

B. Current Architecture and Operating System

C. Current Work Flow/Business Flow and Processes

D. Current Legacy Systems

E. Current System Dependencies

F. Current Infrastructure (Limitations, Restrictions)

G. Usage/Audience Information

7. PRODUCTS AND SERVICES TO SUPPORT THE PROJECT REQUIREMENTS (AND/OR SOLUTION)

A. Required Products (or Solution Components)

(List the products, or if your project is for a Solution, the Solution components, (hardware, software, etc.) provided by Supplier that will be used to support your project requirements. Identify any special configuration requirements, and describe the system infrastructure to be provided by the Authorized User. Provide an overview that reflects how the system will be deployed within the Authorized User's environment.)

B. Required Services

(List the services (e.g., requirements development, Solution design, configuration, interface design, data conversion, installation, implementation, testing, training, risk assessment, performance assessment, support and maintenance) that will be provided by Supplier in the performance of your project. You will notice subsections "C" and "D" below offer areas for expanded detail on training, support and maintenance services. You may add other subsections in which you wish to expand the information/details/requirements for other service areas as well. It is likely some of this detail will be a combination of your known needs and the Supplier's proposal. In all cases the provisions should include all negotiated commitments by both parties, even if you reference by incorporation the Supplier's proposal in any subsection.)

C. Training Requirements and/or Authorized User Self-Sufficiency/Knowledge Transfer

(Provide an overview and details of training services to be provided for your project and any special requirements for specific knowledge transfer to support successful implementation of the Solution. If the intent is for the Authorized User to become self-sufficient in operating or maintaining the Solution, determine the type of training necessary, and develop a training plan, for such user self-sufficiency.

Describe how the Supplier will complete knowledge transfer in the event this Statement of Work is not completed due to actions of Supplier or the non-appropriation of funds for completion affecting the Authorized User.

D. Support and Maintenance Requirements

(Document the level of support, as available under the Contract, required by your project to operate and maintain the Solution. This may include conversion support, legacy system integration, transition assistance, Solution maintenance (including maintenance level), or other specialized consulting to facilitate delivery or use of the Solution.

E. Personnel Requirements

(Provide any supplier personnel qualifications, requirements, licenses, certifications or restrictions including project manager, key personnel, subcontractors, etc.)

F. Transition Phase-In/Phase-Out Requirements

(Describe any specific requirements for orientation or phasing in and/or phasing out of the project with the Supplier. Be specific on what the project needs and expected results are, the duration and other pertinent detail, but ensure they do not conflict with any other training requirements in the SOW.)

8. TOTAL PROJECT PRICE

The total Fixed Price for this Project shall not exceed \$US XXX.

Supplier's invoices shall show retainage of ten percent (10%). Following completion of Solution implementation, Supplier shall submit a final invoice to the Authorized User, for the final milestone payment amount shown in the table in section 9 below, plus the total amount retained by the Authorized User. If travel expenses are not included in the fixed price of the Solution, such expenses shall be reimbursed. In order to be reimbursed for travel expenses, Supplier must submit an estimate of such expenses to Authorized User for approval prior to incurring such expenses.

(Sections 9 through 11 should be used or deleted depending on the project's complexity, risk and need for governance. For a simple project you may only need the section 10 table, but for a more complex project, or a major IT project, you may need a combination of or all of the tables for check and balance and redundancy.)

9. PROJECT DELIVERABLES

(Provide a list of Supplier's deliverable expectations. The table is to be customized for the Authorized User's project. You may want to categorize deliverables for each phase or major milestone of the project and then categorize other interim deliverables and/or performance and status reports under one of them or under an Administrative or Project Management section.)

The following deliverables are to be provided by Supplier under this SOW. Subsequent sections may include further detail on the content requirements for some deliverables.

No.	Title	Due Date	Format Required (i.e., electronic/hard copy/CD/DVD)	Distribution Recipients	Review Complete Due Date	Final Due Date
	Design Plan					
	Project Management Plan					
	Implementation Plan					
	Acceptance Test Plan					
	Acceptance Testing					
	Training					
	Configuration Management Plan					
	Licenses					
	Hardware					
	Warranty					
	Support Services					

10. MILESTONES, DELIVERABLES, PAYMENT SCHEDULE, AND HOLDBACKS

(This table should include the project's milestone events, associated deliverables, when due, milestone payments, any retainage amount to be held until final acceptance and the net payment you promise to pay for each completed and accepted milestone event. This table includes sample data only and must be customized for your project needs.)

The following table identifies milestone events and deliverables, the associated schedule, any associated payments, any retainage amounts, and net payments.

Milestone Event	Schedule	Payment	Retainage	Net Payment
Project kick-off meeting	Execution + 5 days	---	---	---
Project Management Plan	Execution+30 days			
Implementation Plan	Execution + 30 days			
Begin Implementation	Execution + 30 days			

Acceptance Test Plan	Execution + 30 days			
Training Materials	Execution + 60 days	\$10,000	\$1,000	\$9,000
30-Day User Acceptance Testing	Execution + 90 days	\$20,000	\$2,000	\$18,000
Implementation complete	Execution + 120 days	\$10,000	--	\$10,000
Final Acceptance	Execution + 120 days	--	--	\$23,000
Final Documentation	Execution + 150 days			
Configuration Management Plan	Execution + 150 days			

11. EVENTS AND TASKS FOR EACH MILESTONE

(If needed, provide a table of detailed project events and tasks to be accomplished to deliver the required milestones and deliverables for the complete Solution. Reference each with the relevant milestone. A Work Breakdown Structure can be used as shown in the table below or at the very least a Project Plan should have this granularity. The Supplier's proposal should be tailored to the level of detail desired by the Authorized User's business owner/project manager for project governance.)

The following table identifies project milestone events and deliverables in a Work Breakdown Structure format.

WBS No.	Milestone	Milestone Event	Milestone Task	Interim Task Deliverables	Duration
1.0	Site survey				
1.1		Conduct interviews			
1.1.1			Schedule interviews	None	20 days after contract start
1.1.2			Complete interviews	Interview Results Report	25 days after contract start
1.2		Receive AU information			

12. ACCEPTANCE CRITERIA

(This section should reflect the mutually agreed upon UAT and Acceptance Criteria specific to this engagement.)

Acceptance Criteria for this Solution will be based on a User Acceptance Test (UAT) designed by Supplier and accepted by the Authorized User. The UAT will ensure that all of the requirements and functionality required for the Solution have been successfully delivered. Supplier will provide the Authorized User with a detailed test plan and acceptance check list based on the mutually agreed upon UAT Plan.

Each deliverable created under this Statement of Work will be delivered to the Authorized User with a Deliverable Acceptance Receipt. This receipt will describe the deliverable and provide the Authorized User's Project Manager with space to indicate if the deliverable is accepted, rejected, or conditionally accepted. Conditionally Accepted deliverables will contain a list of deficiencies that need to be corrected in order for the deliverable to be accepted by the Project Manager. The Project Manager will have **ten (10)** days from receipt of the deliverable to provide Supplier with the signed Acceptance Receipt unless an alternative schedule is mutually agreed to between Supplier and the Authorized User in advance.

13. PROJECT ASSUMPTIONS AND PROJECT ROLES AND RESPONSIBILITIES

(This section contains areas to address project assumptions by both the Supplier and the Authorized User and to assign project-specific roles and responsibilities between the parties. Make sure that all assumptions are included to alleviate surprises during the project. Ensure that all primary and secondary (as needed) roles and responsibilities are included. You will tailor the Responsibility Matrix table below to fit your project's needs.)

A. Project Assumptions

The following assumptions are specific to this project:

B. Project Roles and Responsibilities

The following roles and responsibilities have been defined for this project:

(Sample Responsibility Matrix)

Responsibility Matrix	Supplier	Authorized User
Infrastructure – Preparing the system infrastructure that meets the recommended configuration defined in Section 2B herein		√
Server Hardware		√
Server Operating		√
Server Network Connectivity		√
Relational Database Management Software (Installation and Implementation)		√
Server Modules – Installation and Implementation	√	
PC Workstations – Hardware, Operating System, Network Connectivity		√
PC Workstations – Client Software		√
Application Installation on PC Workstations	√	

Wireless Network Access Points	√	
Cabling, Electric and User Network Connectivity from Access Points		√
Wireless Mobile Computing Products – Scanners, printers	√	
Project Planning and Management	√	√
Requirements Analysis	√	√
Application Design and Implementation	√	
Product Installation, Implementation and Testing	√	
Conversion Support	√	
Conversion Support -- Subject Matter Expertise		√
Documentation	√	
Training	√	
Product Maintenance and Support	√	
Problem Tracking	√	√
Troubleshooting – IT Infrastructure		√
Troubleshooting – Solution	√	

14. COMMONWEALTH AND SUPPLIER-FURNISHED MATERIALS, EQUIPMENT, FACILITIES AND PROPERTY

(In this section, provide details of any materials, equipment, facilities and property to be provided by your Agency or the Supplier in performance of this project. If none, so state so that the requirements are clear. If delivery of any of these is critical to the schedule, you may want to identify such delivery with hard due dates tied to "business days after project start" or "days after event/milestone." Be sure to specify the delivery and point of contact information.)

A. PROVIDED BY THE COMMONWEALTH

B. PROVIDED BY THE SUPPLIER

15. SECURITY REQUIREMENTS

(Provide (or reference as an Attachment) Authorized User's security requirements.)

For any individual Authorized User location, security procedures may include but not be limited to: background checks, records verification, photographing, and fingerprinting of Supplier's employees or agents. Supplier may, at any time, be required to execute and complete, for each individual Supplier employee or agent, additional forms which may include non-disclosure agreements to be signed by Supplier's employees or agents acknowledging that all Authorized User information with which such employees and agents come into contact while at the Authorized User site is confidential and proprietary. Any unauthorized release of proprietary information by the Supplier or an employee or agent of Supplier shall constitute a breach of the Contract.

Supplier shall comply with all requirements in the Security Compliance section of the Contract

16. REQUIRED STANDARDS, CERTIFICATIONS AND SPECIFICATIONS

In addition to any standards and specifications included in the Contract, Supplier shall follow the standards and specifications listed below during performance of this effort.

(List any specific Commonwealth, Federal, engineering, trade/industry or professional standards, certifications and specifications that Supplier is required to follow or possess in performing this work)

- IEEE 802®
- HIPAA
- SAS 70 Type II

17. RISK MANAGEMENT

(Risk is a function of the probability of an event occurring and the impact of the negative effects if it does occur. Negative effects include schedule delay, increased costs, failure of dependent legacy system interoperability, other project dependencies that don't align with this project's schedule, and poor quality of deliverables. Depending on the level of risk of this project, as assessed by your Project Manager and/or Steering Committee, this section may contain any or all of the following components, at a level of detail commensurate with the level of risk. Remember to add them to the Deliverables table.)

A. Initial Risk Assessment

Authorized User and Supplier shall each provide an initial assessment from their point of view.

B. Risk Management Strategy

1. **Risk Identification Process:** The processes for risk identification.
2. **Risk Evaluation and Prioritization:** How risks are evaluated and prioritized.
3. **Risk Mitigation Options:** Describe the risk mitigation options. They must be realistic and available to the project team.
4. **Risk Plan Maintenance:** Describe how the risk plan is maintained during the project lifecycle.
5. **Risk Management Responsibilities:** Identify all project team members with specific risk management responsibilities. (e.g., an individual responsible for updating the plan or an individual assigned as a manager).

C. Risk Management Plan

(Include a description of frequency and form of reviews, project team responsibilities, steering and oversight committee responsibilities and documentation. Be sure to add all deliverables associated with risk strategizing and planning to the list of Deliverables.)

18. DISASTER RECOVERY

Planning for disaster recovery for your project is paramount to ensure continuity of service. The criticalness and complexity of your project, including its workflow into other dependent systems of the solution.

- *Development of the IT components of the Continuity of Operations Plan (COOP)*
- *Development and exercise of the IT Disaster Recovery Plan (IT DRP) within the COOP*
- *Development and exercise of the IT System Backup and Restoration Plan*

19. PERFORMANCE BOND

(If your project is sizeable, complex and/or critical, and the MSA Contract does not already provide for a performance bond, you may want the Supplier to provide one. The MSA Contract may include an Errors and Omissions insurance requirement, which would cover the Supplier's liability for any breach of the Contract or this SOW. Be sure to read the Contract for this information. However, if you feel that this project warrants further performance incentive due to the project or the Supplier's viability, you may include the following language in this section.)

The Supplier shall post performance bond in an amount equal to one hundred percent (100%) of the total contract value and provide a copy of the bond to Authorized user within (10) days of execution of this SOW Agreement. In the event that the Supplier or any subcontractor or any officer, director, employee or agent of the Supplier or any subcontractor or any parent or subsidiary corporation of the Supplier or any subcontractor fails to fully and faithfully perform each material requirement of this SOW Agreement, including without limitation the Supplier's obligation to indemnify the Authorized User, the performance bond shall be forfeited to Authorized User. The bond shall be in a form

customarily used in the technology industry and shall be written by a surety authorized to do business in Virginia and that is acceptable to Authorized User.

20. OTHER TECHNICAL/FUNCTIONAL REQUIREMENTS

(Provide any other unique project technical and functional requirements and expectations in sufficient detail in this section. Ensure they do not conflict with existing requirements in the MSA Contract. Several examples are listed.)

A. Service Level Requirements

B. Mean-Time-Between-Failure Requirements

C. Data Access/Retrieval Requirements

D. Additional Warranties

21. REPORTING

(The following are examples of reporting requirements which may be included in your SOW depending on the project's need for governance.)

A. **Weekly/Bi-weekly Status Update.**

The **weekly/bi-weekly** status report, to be submitted by Supplier to the Authorized User, should include: accomplishments to date as compared to the project plan; any changes in tasks, resources or schedule with new target dates, if necessary; all open issues or questions regarding the project; action plan for addressing open issues or questions and potential impacts on the project; risk management reporting.

E. **Supplier Performance Self-Assessment.**

Within thirty (30) days of execution of the project start, the Supplier and the Authorized User will agree on Supplier performance self-assessment criteria. Supplier shall prepare a monthly self-assessment to report on such criteria. Supplier shall submit its self-assessment to the Authorized User who will have five (5) days to respond to Supplier with any comments. If the Authorized User agrees with Supplier's self-assessment, such Authorized User will sign the self-assessment and submit a copy to the Supplier Relationship Manager.

F. **Performance Auditing**

(If you have included service level requirements in the above section entitled, Other Technical/Functional Requirements, you will want to include a requirement here for your ability to audit the results of the Supplier's fulfillment of all requirements. Likewise, you may want to include your validation audit of the Supplier's performance reporting under this Reporting section. It is important, however, that you read the MSA contract prior to developing this section's content so that conflicts are avoided. Suggested language is provided below, but must be customized for your project.)

Authorized User (or name of IV&V contractor, if there is one), will audit the results of Supplier's service level obligations and performance requirements on a monthly/quarterly basis, within ten

(10) days of receipt of Supplier's self-assessments and service report(s). Any discrepancies will be discussed between the Authorized User and Supplier and any necessary invoice/payment adjustments will be made. If agreement cannot be reached, the Authorized User and Supplier will escalate the matter in accordance with the Escalation provision of the Contract. (If none, you may add your escalation procedure in this section.)

G. **Supplier Performance Assessments**

(You may want to develop assessments of the Supplier's performance and disseminate such assessments to other Authorized Users of the MSA Contract. Prior to dissemination of such assessments, Supplier will have an opportunity to respond to the assessments, and independent verification of the assessment may be utilized in the case of disagreement.)

22. CHANGE MANAGEMENT

(Changes to the baseline SOW must be documented for proper project oversight. Depending on your project, you may need to manage and capture changes to configuration, incidents, deliverables, schedule, price or other factors your team designates as critical. Changes to the scope of this SOW must stay within the boundaries of the scope of the MSA Contract.

All changes to this SOW shall be in written form and fully executed between the Authorized User's and the Supplier's authorized representatives. For administrative changes, the parties agree to use the change template, attached to this SOW. For technical/functional change management requirements, listed below, the parties agree to follow the processes and use the templates provided.

23. POINT OF CONTACT

For the duration of this project, the following project managers shall serve as the points of contact for day-to-day communication:

Authorized User: _____

Supplier: _____

By signing below, both parties agree to the terms of this Exhibit.

Supplier:

SiteVision, Inc. _____

(Name of Supplier)

By: _____

(Signature)

Name: _____

(Print)

Title: _____

Date: _____

Authorized User:

(Name of Agency/Institution)

By: _____

(Signature)

Name: _____

(Print)

Title: _____

Agency Head or Designee

Date: _____
